

Bucket Filter

ASSEMBLY INSTRUCTIONS

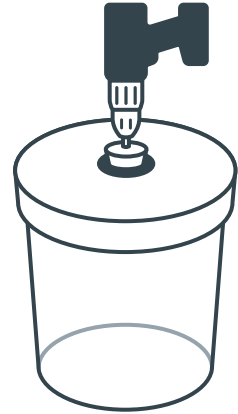

1

Using a 20mm, hole saw, drill the upper bucket in the bottom center.

2

Using a 20 mm hole saw, drill the lower bucket 40 mm from the bottom for the included water tap.

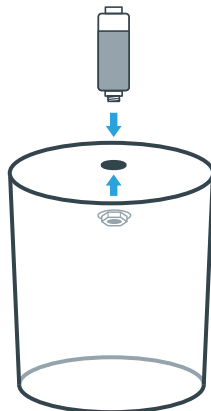

3

Using a 50 mm hole saw, drill the lid of the lower bucket in the center.

4

Unscrew the nut from the top of the filter

5

Place the threaded end of the filter (with the black gasket) through the hole in the upper bucket. Screw the nut onto the threaded portion of the filter inside the bucket.

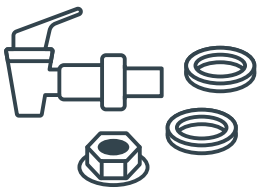

6

Hand-tighten the nut firmly, securing the filter to the upper bucket.
Do not use a wrench or other tool to tighten.

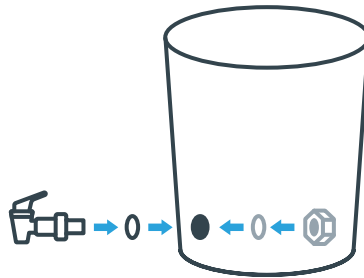

Bucket Filter

ASSEMBLY INSTRUCTIONS

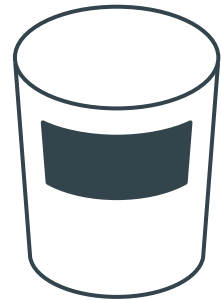

7

Disassemble the water tap as shown.

8

Place the water tap assembly and one gasket through the hole drilled on the side of the clean water storage bucket. Place the second gasket on the male threads on the inside of the clean water storage bucket and hand tighten.

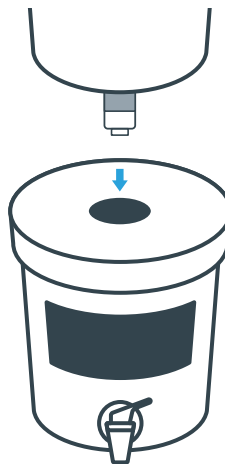

9

Place the enclosed instructional stickers onto each bucket.

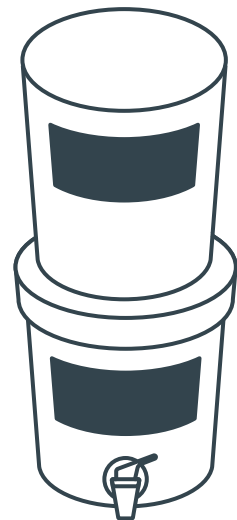

10

Place the lid on top of the clean water storage bucket.

11

Place the upper bucket on top of the lower bucket.

12

Your Uzima water filtration system is now ready to deliver clean drinking water.
